### Spektrum+ Smart Lighting from American Lighting – A Spektrum+ Home Is A Happy Home

The Spektrum+ Smart Lighting system from American Lighting is a full-home illumination system that seamlessly immerses users in light as they go about their day. Full-color spectrum luminaires of all types, from downlights to undercabinet lights, tapelight, and multiple kinds of outdoor lights, can find a place to call home in any room of the house. The entire system can be controlled in a multitude of ways, including a smartphone/tablet app, smart wall switches, door and window sensors, as well as smart home assistant devices, giving users total integrated control, no matter where they are.

Spektrum+ Smart Lighting is all-inclusive when it comes to lighting up a home. RGB+TW (2700K-6000K) retrofit and direct install downlights, under cabinet puck lights, and flush mount ceiling lights are the perfect solution to modernize in-home lighting with a more traditional-style aesthetic. Spektrum+ Tape light and linear neon lights are available to bring a contemporary touch to any space in the house. The Spektrum+ family also includes replacement bulbs for standard size light bulbs, including A19, BR30, S14, and MR16, all with Spektrum+ RGBTW technology built inside.

To round the line out, the outdoor sconce and landscape luminaires give users total control to paint colorful lightscapes across the entire house, inside and out.

Controlling the Spektrum+ Smart Lighting system is as easy as connecting over Bluetooth and tapping a screen. Using the Spektrum+ app, users can control color, brightness and dim, chase patterns, as well as build schedules to help with daily circadian rhythm, and so much more. For a more home-integrated solution, Spektrum+ smart wall switches, controls, and sensors can be connected to any Spektrum+ system. In addition, smart plugs and outlet receptacles are available to make any standard appliance a “smart device,” giving users the ability to control the appliance using the Spektrum+ app.
