

## Omni® Split System Heat Pump Water Heater

The Eco-Logical Omni Split System Heat Pump Water Heater represents the next generation of efficient, quiet, and space-conscious water heating. Unlike tower-style heat pump water heaters, this split system separates the heat pump and tank, connected via Eco-Connect™ refrigerant lines.

### Key Advantages Over Tower Designs

#### Higher Energy Savings

With a Uniform Energy Factor (UEF) up to 4.23 and a Coefficient of Performance (COP) up to 5.45, the Omni delivers 40–60% more energy savings than tower-style models and over 400% more than traditional electric or gas heaters. That translates to lower utility bills and a smaller carbon footprint.

#### Compact, Easy Installation

Weighing only 130 lbs for the tank and 65 lbs for the heat pump, it's easy to transport and ideal for ADUs, manufactured homes, and multi-family buildings. The outdoor unit connects with semi-rigid refrigerant lines—no HVAC tools required.

#### Cold Climate Ready

Operates in heat pump mode down to 5°F and hybrid mode to -35°F without the need for heat tape.

Eco-Logical is rooted in over 50 years of collective experience in the energy efficiency sector, dedicated to developing impactful energy-saving programs, providing essential energy-efficient products, and supporting underserved communities in reducing both their energy consumption and utility costs.

We believe every community plays a vital role in fostering a healthier environment. Our OMNI series, inspired by the idea of “everything, everywhere,” is thoughtfully designed to meet the hot water needs of disadvantaged communities, offering universal solutions that work across a variety of housing types—whether multi-family units, mobile homes, or alternative dwelling units (ADUs). By providing adaptable, efficient solutions, we aim to improve comfort and sustainability for all, everywhere.

## Innovation & Performance

- **Industry first HPWH** designed for Mobile Homes
- **Designed to fit** Everywhere, Everything
- **Industry highest UEF** 4.23
- **First HPWH to use Low GWP** R513A
- **Eco-Connect** resealable refrigerant system
- **Certified:** ENERGY STAR, NEEA 8.1, JA13, Eco-Port, CEC, and DOE
- **Connectivity Protocols:** Wi-Fi, CTA-2045B L2 Eco-Port
- **10-year warranty**
- **Meets CEE** Advanced Tier criteria

Available now.
