

Trane® Link Technology

TRANE®

It's Hard To Stop A Trane.®

Trane® Link provides innovative features designed to revolutionize the way installation, commissioning, and remote monitoring are conducted on variable speed systems. Expect a higher degree of installation accuracy, faster commissioning, and reduced callbacks.

The Trane Technician app accesses Trane Link's built-in system sensors so technicians can easily configure or diagnose a system from the palm of their hand. Leave those gauges and probes on the truck!

With this detailed information and monitoring, Trane Link is sure to transform the variable speed experience and reliability from start to finish – making it one more reason why Trane is more reliable than ever. These benefits are enabled by several core Trane Link capabilities:

Installation & Commissioning Ease

Built to be “plug and play”

- Technician mobile app for fast system setup
- Bluetooth mesh allowing connection to the equipment
- Standardized color-coded wiring
- Self-identification of equipment
- Core setup, control, testing, and commissioning can be completed via Bluetooth without Wi-Fi
- Unique settings, such as electric heat lockouts, can be configured through the app or thermostat

Installation Accuracy

Helping technicians ensure a quality install

- System auto-configures based on model & serial number
- Automated Charging via SmartCharge™
- Automated commissioning tests
- Commissioning reports generated for both contractors and homeowners
- Commissioning results retained for future reference
- Technicians can view temperatures, airflow, power measurements, and pressures in-app
- Many diagnostic checks can be completed without traditional gauges or meters

Enables Remote Monitoring

Enables quicker solutions and more efficient service calls

- Expanded data provided by Link technology
- Continuous monitoring with Diagnostics
- Remote configuration
- Software updates automatically over WiFi
- Real-time and historical alerts, runtime history, and energy usage visibility
- Homeowner-authorized dealer monitoring and remote access
- Multiple-user homeowner access with customizable permissions
- Core HVAC functionality remains accessible at the thermostat even if Wi-Fi is unavailable
- Local data buffering helps preserve diagnostics continuity during connectivity interruptions

Product Specifications

- **Connectivity Protocols:** Bluetooth Low Energy (BLE), Wi-Fi, Z-Wave, Open ADR 2.0b, and HCA
- **Platform Compatibility:** Amazon Alexa, Google Home
- **App Availability:** IOS/Apple App Store, Android/Google Play Store
