

Savant Smart Budget

SAVANT

Savant Smart Budget is the smart alternative to an electrical service upgrade where homeowners can use their existing electrical service but decide what elements of the home they're powering at any given time.

By installing Savant Power Modules in the home's existing electrical panel, homeowners can manage power efficiently for their essentials while introducing new appliances, heat pumps, EV Chargers, and more. The homeowner might not need everything powered around the clock, and this is what makes room for them to add an EV charger or heat pump and be able to direct their available power where they need it most. Savant's Smart Budget feature prioritizes how power is used in the home by monitoring live consumption, shedding unnecessary loads, and balancing usage within a limited electrical service. This powerful solution starts at a modest \$1499 and can scale to monitor and manage any or all circuits in the home.

Savant Load Management, featuring Smart Budget, can be deployed across a utility's service region to support electrification, mitigate service upgrades and manage demand at the home level.

Product Specifications

- **UL Power Module Listing:** UL60730-1
- **UL3141 (PCS-Load Control)** in progress for Q4.
- **Energy Management Features:** Daylight sensing, away mode, low power mode, energy consumption reporting.
- **Programmable Energy Scenes:** Allows users to proactively manage their circuits through scheduling and manual toggling in the app.
- **Connectivity Protocols:** Ethernet, WiFi, and Bluetooth Low Energy (BLE). Cellular Network Connection (LTE) options also available.
- **Platform Capability:** Amazon Alexa and Google Home. Energy Scenes are created through the Savant app and can be controlled through smart home platforms.
- **Warranty:** 5-year on power modules; 2-year on power director.

Will be available in Q4, 2024.
